

## autoSCRIBE

The idea for autoSCRIBE<sup>TM</sup> was originally conceived for Fringe Benefits tax reporting purposes in Australia in 1997. From this initial application, the autoSCRIBE<sup>TM</sup> system has been developed to enable organisations to reduce fleet and employee costs by capturing and analysing accurate vehicle and equipment usage information. The system is not just a unit that replaces a paper logbook - autoSCRIBE<sup>TM</sup> includes an administration software package that automates the entire logbook analysis process. Unlike GPS based systems which cannot record purpose of use, autoSCRIBE<sup>TM</sup> can quickly and accurately record anything your drivers or operators know, and some things they don't! It is the only electronic system on the market that:

- uses a combination of electronic interfacing and voice recording for data gathering;
- can collect the exact data that paper logs and forms often fail to capture;
- ensures near perfect data accuracy and ease of use without sacrificing important details;
- can be quickly customised for any logging application.

autoSCRIBE<sup>TM</sup> is the most cost effective electronic mobile management system on the market.
